- USB Interface
- Includes hand held CCD Scanner
- Long Battery Life: 75,000 Laser Scans
- Weighs less than 12 oz.
- LCD display 4x20 characters
- Two Year Warranty

Price: \$950.00 without optional gun scanner.

The portable bar code reader is delivered set-up for use with Intersect's RCAMS Records Control and Management System records database. With the Intersect Bar Code Inventory software module, the bar code reader can be used to read shelf space bar codes and container bar codes, and input these into the RCAMS space matrix through a USB port on the computer system running RCAMS. The reader helps insure accurate inventory and management of containers, and provides for convenient check-in of records. The reader also provides a reconciliation function that identifies and reports discrepancies in container locations and space assignments.

The Intersect RCAMS Bar Code Inventory software module is available to organizations with a current RCAMS for a one-time, paid-up license of \$1,400.00. There is no increase in the current RCAMS Annual Support Program cost for current Intersect RCAMS users.

Available Spring 2006.
